

Reference: Nature Vel-AG

Crops: Mustard, wheat

Country: India, Pakyong

Contact: Clover Organic Pvt. Ltd.

Report on trial conducted on Natur Vel-AG – reg. :

- 1) During the winter season of 2008, the product Nature Vel-AG¹ was included in a research program at the research farm ICAR Sikkim Centre, Tadong, at an altitude of 1400m. The research was carried out on mustard and the Nature Vel-AG was added as part of an organic nutrition package. The experiment was laid out in a randomised block design and the organic nutrition was added as a foliar application and for soil drenching. Nature Vel-AG was added with compost for the crop under the organic POP (package of practice). It was found that the mustard grain yield (var. M-27) was significantly increased by 13,8%. Soil samples have been collected for analysis. Further, it must be mentioned that the convenience of use of Nature Vel-AG is much higher than any other similar product.
- 2) Nature Vel-AG was also used in another experiment as part of an organic nutrition for wheat crops (local cultivator). Also for this experiment the applications were made in randomized block design with four treatments and four replications. The crop is in milking stage. Under the influence of the organic nutrition the plots are healthier and have better crop stands than with the other treatments.
